

MADAuthor Ideas

Enhancement roadmap and MADProspects Universe integration concepts.

This document proposes product, AI, publishing, operations, and ecosystem ideas. It is deliberately expansive: some items are quick wins, while others are platform bets that connect MADAuthor with the broader MADProspects universe.

1. Product Vision

MADAuthor can become the publishing engine for the MADProspects Universe: a system that turns knowledge, conversations, campaigns, training, sermons, recruiting material, and business expertise into books and companion products.

The strongest direction is not only 'AI writes books'. The stronger platform promise is 'MADProspects captures valuable knowledge and MADAuthor packages it into professional, reusable, monetizable intellectual property.'

- Authoring engine for books, workbooks, devotionals, manuals, playbooks, proposals, onboarding packs, and curriculum.
- Publishing layer for lead magnets, authority assets, campaign content, and client deliverables.
- Knowledge repackaging tool that turns MADProspects data into long-form assets with structure and metadata.
- Shared AI/prompt infrastructure that improves across all MAD applications.

2. High-Impact UX Enhancements

Idea	Why it matters
Project timeline	Show the full journey from intake through exports with completed/current/blocked stages.
Inline chapter editor	Let users edit generated Markdown directly in the browser with autosave, comments, and compare-to-original.
Version history	Allow rollback between outline, chapter, metadata, and cover versions.
Manuscript quality dashboard	Highlight repetition, chapter imbalance, reading level, missing citations, placeholder text, and continuity warnings.
Guided approval gates	Make outline, first chapter sample, metadata, and final proof approval explicit checkpoints.
Project templates	One-click setup for memoir, devotional, business book, sermon series, workbook, course book, fiction, journal, and children's book.
Smart next action	At the top of each project, tell the user the most important next step: approve outline, replace placeholders, review chapter 3, choose cover, or export.

The product should always make the next useful action obvious. Authors should feel momentum, not a pile of tabs.

3. AI Pipeline Improvements

- **First chapter sample approval:** generate one sample chapter after the outline and ask the author to approve voice before drafting the whole book.
- **Style memory:** let users upload writing samples and create reusable voice profiles for future projects.
- **Source-grounded drafting:** require the Writer to cite which uploaded asset or research note informed each major section.
- **Continuity repair loop:** automatically create targeted edit jobs for contradictions found by the Continuity agent.
- **Claim checker:** flag statistics, legal/medical/financial claims, names, dates, and unverifiable statements.
- **Scripture/citation guardrails:** for Christian or academic books, track translation, reference style, and citation confidence.
- **Human-in-the-loop critique:** offer editorial lenses such as developmental editor, copy editor, theological reviewer, business reader, educator, or target-market beta reader.
- **Prompt evaluation suite:** keep golden test projects and compare agent output after prompt/template changes.

Pipeline quality should be measured with durable checks: chapter completeness, word target variance, placeholder removal, outline adherence, source usage, and export readiness.

4. Research and Source Management

Feature	Description
Source library	Every uploaded file becomes searchable, taggable, and quote-addressable.
Evidence map	Show which chapters use which uploaded sources, interview notes, sermons, or web research.
Citation manager	Generate endnotes, bibliography, scripture references, links, and citation styles.
Interview ingestion	Upload audio, transcribe, summarize, extract quotes, and mark sensitive/private segments.
OCR cleanup	Improve scanned PDFs by detecting poor OCR, duplicate headers, page numbers, and footers.
Fact packet export	Give reviewers a document containing claims, sources, and verification notes.

5. Editing, Collaboration, and Review

- Add reviewer invitations with role-specific permissions: read-only, commenter, editor, publisher, cover designer, admin.
- Enable comment threads on chapters, metadata fields, covers, and exports.
- Provide redline exports showing AI edits versus author edits.
- Create beta-reader packets with selected chapters, feedback questions, and deadline tracking.
- Add editorial checklists for memoir, devotional, business, fiction, workbook, and children's formats.
- Support compare views: draft vs edited, current vs previous, original source vs generated chapter.
- Track decisions: accepted, rejected, deferred, needs human review.

Collaboration is a likely monetization lever. Teams, publishers, coaches, editors, and agencies will pay for permissions, workflow, and accountability.

6. Publishing and Commerce

Idea	Potential value
Retail metadata pack	Export KDP/Ingram/Google Play/Apple Books metadata as platform-specific checklists.
Launch kit	Generate emails, ads, landing page copy, press release, author Q&A, and social calendar.
ISBN and imprint manager	Track ISBNs, imprint names, copyright owners, editions, and publication dates.
Royalty calculator	Estimate print cost, list price, royalties, and break-even campaigns.
Proof checklist	Page count, trim size, bleed, margins, cover wrap dimensions, metadata, and placeholder scan.
Marketplace services	Offer human editing, cover design, layout, launch management, translation review, and publishing assistance.

7. Cover, Media, and Derivative Products

- Advanced cover studio with spine text, barcode placement, trim presets, CMYK/preflight checks, and retailer-specific warnings.
- Series branding system that keeps fonts, colors, author mark, and layout consistent across multiple books.

- Audiobook pipeline: narration script cleanup, voice selection, chapter audio generation/recording, proofing, and ACX-style packaging.
- Video trailer generator: book hook, cover animation, captions, voiceover, and platform-specific aspect ratios.
- Course generator: slides, workbook, facilitator guide, quizzes, assignments, certificate, and learning path from the manuscript.
- Children's edition generator: age band, illustration brief, simpler language, parent/teacher notes, and safety review.
- Workbook and devotional editions: reflection questions, journaling prompts, exercises, prayers, weekly plans, and group discussion guides.

8. Operations and Platform Enhancements

Area	Ideas
Queue reliability	Dead-letter queue, job deduplication, retry policies by job type, stuck-job detector, and replay tooling.
Worker scaling	Multiple worker profiles: planner, writer, editor, export, media, and operator/deploy workers.
Admin observability	Per-tenant usage, token spend, average job duration, failure rate, export volume, and storage growth.
Prompt governance	Template versions, approval workflow, rollback, test runs, and output scorecards.
Billing hooks	Track credits by job type, export type, storage, translation, media generation, and human services.
Compliance	Audit logs, content policy review, source licensing, PII detection, and tenant data export/delete tools.

9. MADProspects Universe Integrations

The best ecosystem strategy is to make MADAuthor the long-form publishing layer for other MADProspects applications. Each app can feed structured data, conversations, and assets into MADAuthor; MADAuthor returns books, playbooks, reports, campaigns, courses, and authority assets.

Application area	Integration ideas
MADRecruiting	Turn job specs, onboarding material, interview insights, candidate training, employer branding, and leadership content into onboarding handbooks, assessment workbooks, recruiter playbooks, and niche authority books.
MADProspects CRM / lead engine	Generate personalized lead magnets, proposal books, account-based mini-books, nurture email sequences, case study compilations, and prospect education packs from CRM notes and campaign data.
MADCreate / creative studio	Use MADAuthor manuscripts to generate landing pages, ad sets, cover variants, social packs, launch visuals, and branded author media.
MADLearn	Convert books into courses, lessons, quizzes, slides, assignments, certificates, facilitator guides, and learner progress paths.
MADCloud	Centralize users, tenants, billing, assets, notifications, deployment tasks, and AI worker settings across all MAD apps.
MADAI / prompt platform	Share prompt templates, model routing, evaluation harnesses, safety rules, usage metrics, and reusable agents across the universe.
MADPulse analytics	Show author progress, campaign impact, reader engagement, export usage, worker health, sales funnel influence, and content ROI.
Church/ministry apps	Transform sermon series, devotionals, discipleship tracks, Bible studies, small-group curricula, testimonies, and ministry training into books and study guides.

Application area	Integration ideas
Client services / agency ops	Offer done-for-you publishing packages, editorial workflows, launch campaigns, and content repurposing for clients.
Knowledge base / support	Turn internal SOPs, FAQs, support chats, and implementation notes into manuals, training books, and customer success guides.

10. Integration Patterns

- **Shared identity:** one MAD account, company, role, and billing model across apps.
- **Shared asset library:** files, images, source documents, covers, transcripts, and exports available across authorized products.
- **Event bus:** when a CRM campaign closes, a recruiting project launches, or a course completes, MADAuthor can suggest a book/playbook output.
- **Reusable content graph:** prospects, companies, jobs, sermons, campaigns, courses, and notes become typed source nodes for generated products.
- **Universal task queue:** MAD Cloud tasks can represent build, deploy, content, editorial, publishing, and support work across products.
- **API contracts:** standard 'CreateAuthoringProject' and 'ExportDerivativeProduct' endpoints let other apps launch MADAuthor workflows safely.

Avoid one-off integrations. Create a small set of durable contracts: source bundle in, project created, job queued, progress event, export ready, asset returned.

11. Prioritized Roadmap

Horizon	Recommended work
Next 30 days	Polish login/CORS/deploy reliability, seed superadmin, stabilize local dev, finish upload-to-request stitching, improve export readiness checks, and add a clear next-action banner.
Next 60 days	Inline chapter editor, version history, first chapter sample approval, source library, metadata completeness score, and better admin queue observability.
Next 90 days	Course/workbook/devo derivative products, collaboration/reviewer permissions, advanced cover wrap studio, launch kit generation, and MADProspects CRM/recruiting source bundle integration.
Platform bets	Shared MAD identity, asset graph, prompt governance, billing/credits, universal analytics, and multi-worker orchestration across the MADProspects Universe.

12. Monetization Ideas

- Tier by active projects, export formats, AI credits, storage, translation volume, media generation, and collaboration seats.
- Sell publishing packages: manuscript polish, cover design, KDP setup, launch kit, and translation review.
- Offer agency/team tiers for coaches, churches, publishers, recruiters, and consultants managing many authors or clients.
- Create add-ons for audiobook, course conversion, workbook/devotional editions, and professional review.
- Bundle MADAuthor with MADRecruiting or CRM campaigns as authority-building packages.

13. Risks and Guardrails

Risk	Guardrail
Generic AI output	Use better intake, voice profiles, sample approval, source grounding, and human review checkpoints.
Copyright/source misuse	Track source licenses, attribution, quotes, and source-derived passages.
False claims	Add claim detection, citation requirements, and review labels for sensitive domains.
Tenant data leakage	Keep company isolation, scoped storage, authorization checks, and audit logs central.
Publishing mistakes	Use proof checklists, placeholder scans, metadata validation, cover preflight, and export QA.
Runaway job costs	Add credit accounting, job estimates, quotas, retry limits, and admin spend dashboards.

The product should be ambitious, but publishing is trust-heavy. The application needs visible quality gates so users know what is AI-generated, what is source-backed, what needs review, and what is ready to publish.

14. North Star

The north star is a MADProspects content engine where every valuable interaction can become durable IP: a lead magnet, book, course, workbook, proposal, devotional, training guide, playbook, or campaign. MADAuthor is the place where that IP becomes structured, polished, exportable, and commercially useful.

The practical path is to stabilize the current book workflow, add author trust features, then connect MADAuthor to the rest of the MAD universe through shared identity, assets, source bundles, tasks, analytics, and billing.

15. MADRecruiting Integration Blueprint

MADRecruiting can become one of the strongest feeder systems for MADAuthor because recruiting produces structured knowledge: job descriptions, interview notes, candidate profiles, employer value propositions, onboarding content, compliance material, and training gaps.

Source in MADRecruiting	MADAuthor output
Job spec and success profile	Role handbook, onboarding guide, interview preparation booklet, manager briefing, and candidate expectation guide.
Candidate interview notes	Candidate development plan, coaching workbook, strengths profile, and personalized onboarding roadmap.
Employer brand material	Company culture book, recruitment lead magnet, hiring manager playbook, and careers-page content pack.
Training gaps	Micro-course, workbook, SOP manual, and practical assessment guide.
Recruiter process notes	Recruiting methodology book, internal training manual, and client-facing recruitment playbook.

A practical first integration is a 'Create onboarding guide' button inside MADRecruiting that sends a source bundle to MADAuthor: job spec, company overview, hiring manager notes, competencies, and candidate persona.

16. CRM and Lead Engine Blueprint

The CRM side of MADProspects can use MADAuthor to turn campaign knowledge into authority assets. This is especially valuable for account-based marketing, consultants, coaches, B2B service providers, and agencies.

- Generate a prospect-specific mini-book from CRM notes, pain points, industry, objections, and proposed solution.

- Create lead magnets from frequently asked questions, sales call transcripts, webinars, and case studies.
- Build personalized proposal books that combine diagnosis, education, implementation plan, proof, and pricing context.
- Turn closed-won projects into anonymized case study collections.
- Feed book launch assets back into CRM as nurture sequences, retargeting copy, and follow-up tasks.
- Score content ROI by linking downloads, email engagement, meetings booked, deals influenced, and revenue.

MADAuthor should return structured outputs to the CRM: asset URL, title, summary, campaign copy, landing page copy, and recommended follow-up sequence.

17. MADLearn Integration Blueprint

MADAuthor manuscript element	MADLearn derivative
Chapter	Lesson with objectives, summary, transcript, quiz, and assignment.
Action steps	Practice exercise, worksheet, or implementation task.
Reflection questions	Discussion prompt, journal assignment, or coaching question.
Framework	Module structure, visual model, facilitator notes, and assessment rubric.
Case studies	Scenario exercises, branching discussions, and learner submissions.
Glossary	Flash cards, quick reference guide, and knowledge checks.

The long-term opportunity is a single 'Book to course' workflow where MADAuthor exports a course package directly into MADLearn with lessons, quizzes, slides, facilitator notes, and downloadable workbook sections.

18. Ministry and Community Blueprint

MADAuthor is naturally suited to sermon, devotional, discipleship, and teaching content. Many ministries already produce weekly content but do not package it into durable resources.

- Sermon series to devotional book with daily readings, prayers, and reflection questions.
- Bible study guide with leader notes, participant questions, weekly assignments, and scripture references.
- Testimony collection with privacy review, consent tracking, and thematic organization.
- New believer handbook, volunteer training manual, leadership curriculum, and small group launch pack.
- Youth or children's adaptation with age-level language, parent notes, and illustration prompts.
- Multilingual devotional export with translation review workflow.

Guardrails are important in this segment: scripture translation preference, doctrinal boundaries, attribution, sensitive testimony handling, and human pastoral review should be first-class workflow settings.

19. Shared Platform Services

Shared service	What it enables
Identity and roles	One login, consistent tenant membership, unified admin roles, and cross-app permissions.
Asset library	A shared source of documents, images, audio, video, transcripts, exports, and generated media.
AI orchestration	Common model routing, prompt templates, evaluations, safety checks, retries, and usage tracking.
Billing and credits	One credit ledger for writing, exports, translations, media generation, storage, and human services.
Notifications	A single notification center for job progress, reviews, tasks, approvals, exports, and deploys.
Analytics	Unified dashboards for usage, content ROI, funnel impact, worker health, and customer outcomes.
Task system	One operator queue for product work, customer work, publishing tasks, and deploy control.

20. Suggested Data Contracts

Integrations should pass structured source bundles into MADAuthor. A source bundle is more durable than a pasted prompt because it can preserve provenance, permissions, and future re-use.

Contract	Fields
CreateAuthoringProject	TenantId, sourceApp, title, audience, goal, projectType, language, sourceBundled, requestedOutputs, dueDate, ownerUserId.
SourceBundle	Documents, transcripts, CRM notes, job specs, tags, source permissions, attribution, extraction status, and sensitivity labels.
QueueDerivativeOutput	ProjectId, outputType, format, styleProfile, platformTarget, reviewRequired, and callback destination.
ExportReadyEvent	ProjectId, outputType, assetUrl, summary, metadata, status, createdDate, and originating source IDs.
ReviewRequest	ProjectId, reviewerRole, targetSection, dueDate, requiredChecklist, and notification channel.

These contracts make the universe composable. Any app can create a source bundle; MADAuthor can transform it; the originating app can consume the finished asset.

21. Metrics and KPIs

Metric	Why it matters
Project completion rate	Shows whether users move from idea to export or abandon halfway.
Time to first outline	Measures how quickly the platform gives visible value.
Time to approved manuscript	Measures true production throughput.
Average retries per job type	Highlights unstable prompts, providers, or infrastructure.
Export format mix	Shows whether users care most about PDF, DOCX, EPUB, print, or derivative products.
Placeholder defects caught	Measures value of metadata/front-matter QA.
Source-grounding coverage	Shows how much of a manuscript is connected to supplied material.
Content ROI	Links generated assets to leads, meetings, course enrollments, applications, sales, or donations.
Human service attach rate	Measures opportunities for editing, cover, publishing, and launch packages.

22. Backlog of Concrete Features

Feature	Notes
Autosave rich chapter editor	Markdown editor with preview, comments, version history, and export-aware formatting.
Chapter regenerate with instruction	Regenerate a chapter with a targeted note while preserving outline and project voice.
Metadata completeness meter	Score KDP description, keywords, subtitle, bio, copyright, blanks, and categories.
Cover A/B board	Compare cover variants at thumbnail size and collect reviewer votes.
Export preflight	Warn about missing metadata, blank chapters, placeholder fields, weak cover, and unsupported characters.
Reviewer portal	Limited-access review links for beta readers, editors, pastors, coaches, and clients.
Source quote browser	Search uploaded sources and insert verified quotes into chapters.
Prompt template lab	Run templates against sample projects and compare outputs before promoting them.
Job cost estimator	Estimate credits/time before launching a large project or translation.
Tenant style guide	Reusable brand voice, spelling preferences, banned phrases, scripture translation, and formatting rules.
Series manager	Group books under a series with consistent metadata, covers, fonts, and launch assets.
Launch calendar	Tasks and dates for cover reveal, beta reads, preorders, email sequence, ads, and publication.
Human services marketplace	Request editing, cover design, layout, publishing setup, or marketing help from vetted providers.
